Lazy Font Loading New

- Bart Coppens
- **Forum name:** #GemBox.Document Feature Request

Problem: embedding Fonts in an assembly (using FontBaseResourceLocation) is limiting in some scenarios where the maximum size of the assembly is limited.
Solution: When GemBox.Document can't find the required Font when generating a pdf, it should attempt to load it dynamically by requesting it from the user. For example, a delegate could be made available to allow the user to retrieve the font and provide it as a stream.
