Load Fonts from Embedded as Resource in a DLL Completed

- john grace
- Forum name: #GemBox.Document Feature Request

Hi,

At the moment for medium trust support you can load fonts from a directory such as,

FontSettings.FontsBaseDirectory = Server.MapPath("Fonts/");

It would be great if you could support loading a custom font that is embedded as a resource in a DLL. As there are some low trust environments where you have no disk access at all. Thanks

John
