GemBox Support Center

API support for Composite charts Completed

- MG Mario - GemBox
- **Forum name:** #GemBox.Spreadsheet Feature Request

Request for adding API support for Composite charts.

Currently GemBox.Spreadsheet supports Composite charts (charts with mixed data series type) only through preservation.
This means that these elements are preserved so we don't lose any relevant workbook information when loading and saving to an XLSX format, but they are not directly supported by GemBox.Spreadsheet API.

The following link is a demonstration sample of preserving unsupported Chart types when reading from XLSX file and writing to XLSX file:
https://www.gemboxsoftware.com/spreadsheet/examples/excel-chart-preservation/303
More information about GemBox.Spreadsheet's preservation can be found on the following link:
https://www.gemboxsoftware.com/spreadsheet/docs/preservation.html

Unfortunately, these composite charts are not properly rendered when exporting to PDF. Would be nice to have all charts rendered as Excel does or at lease have a function which would tell if the chart is supported. This would allow us to remove the chart in this case instead of producing a wrong chart which would lead to errors.

This would be a valuable add to the toolkit. We have some scenarios that are valuable to have a bar chart with 1 or 2 line charts for showing some averages.

I agree, many of the charts I have to produce are composite, so being able to do this would be invaluable.

Hi, This feature request has been implemented and is available in the latest versions of GemBox.Spreadsheet.
Regards, Mario
