GemBox Support Center

Further Shape Support Completed

- MG Mario - GemBox
- **Forum name:** #GemBox.Document Feature Request

Request for adding API support for additional shape types.

GemBox.Document currently has API support for the following shape types:
https://www.gemboxsoftware.com/document/docs/GemBox.Document.Drawing.ShapeType.html

NOTE:
Please specify in the comments which shape type (or types) you request or attached the document which contains the required shapes.

My killer shape-related feature request would be for wmf/emf import to pdfs to remain vectors. I use the Microsoft Charting controls to place graphs in PDFs. The charts can be exported to vector format wmf, but loading into GemBox causes it to be rasterized. I increase the resolution and scale the picture, but printing is still pixelated, especially axis labels.

In our company, we have some instructions, and many various manuals in docx where people could add different kind of shapes from Word... We require all shapes (not only basic) in the future release.
