Support for background image in charts Ongoing

- Thomas Brown
- **Forum name:** #GemBox.Spreadsheet Feature Request

When using an XLSX file as a template and saving as a PDF, preserve the background image in a chart.

Currently, if you use an XLSX file as a template and save as a PDF, the background image is not preserved.

I have the same issues at the moment. If I want nice looking charts, I have to create them in the software and insert them as an image into the excel file in order to have any control over chart formatting. please implement this.
