GemBox Support Center

Multiple FontBaseDirectory New

- CL Christian Luidolt
- **Forum name:** #GemBox.Document Feature Request

At the moment it's only possible to set a single font directory using `FontSettings.FontBaseDirectory`

It would be nice to be able to specify more than one directory to be searched for fonts.

A common use case would be that some fonts are shipped with the product and additional fonts can be configured by the user. To simplify the update process these fonts should be located in different directories.

Note: this Feature Request also applies to GemBox.Presentation and GemBox.Spreadsheet
