GemBox Support Center

NET Core support Completed

- IK Ivan Kudyk
- **Forum name:** #GemBox.Spreadsheet Feature Request

NET Core is so far the most perspective way to make cross-platform applications on C#. I wish there was a support for GemBox in .NET Core so that UNIX-like OS holders could write applications using GemBox.

I just came to check if .NET core was supported yet. If it was I'd be upgrading, since we plan to start using .NET core in the future.

We plan to port our product to UNIX-based OSs and need Gembox to support .Net Core

Hi, We are currently working on this, we will release a version of GemBox.Spreadsheet for .NET Standard. Unfortunately, at this moment I do not have its exact release date, nevertheless if I were to guess I would say that a new version should be available within a month or two. Regards, Mario

Do you have an updated guess on when the new version will be released? We have been waiting on this release and it is getting at the end of your original guess.
