Set JPEG Quality in ImageSaveOptions New

- Marian Szewczyk
- **Forum name:** #GemBox.Pdf Feature Request

ImageSaveOptions supports ImageSaveFormat.Jpeg, and there is also a TiffCompression option, but no option for the JPEG quality.

Apparently, a default value for the JPEG quality is used, which is very high. This can have a huge impact on storage space.

It would be great to be able to configure this value in the options.

This would be useful for all other GemBox packages too.
