Support auto-sized text frames in PDF New

- DD Dmitry Dobrovolsky
- **Forum name:** #GemBox.Document Feature Request

Currently, when converting doc file to PDF, page number block position differs from original in case when its size set to auto. Everything works good when it has fixed size.

Attached documents are:
PageNumber.doc - Word-document with two page-number blocks in the header, one has fixed size and one auto.
PageNumber.pdf - converted PDF file which showing difference between page-number blocks.

Hi, GemBox.Document currently doesn't provide an API support for text frames, instead they are converted to TextBox elements when exporting to PDF. Unfortunately, some options like "auto-size", don't exist in TextBox elements. Anyway, we recommend the usage of TextBox elements, instead of frames, to position the paragraphs in your Word documents on desired locations. Regards, Mario GemBox d.o.o.
