Support conversion of HTML <hr>> tag to Excel Completed

- AD Alex Dortok
- Forum name: #GemBox.Spreadsheet Feature Request

When opening a HTML document in Excel, Excel renders the <hr> tag as a line that spans the width of the row (up to the last used column). When using GemBox to convert the HTML to Excel, the <hr> tag is ignored and nothing displays. It would be very useful to have this line preserved after converting to Excel.
