GemBox Support Center

Support embedded Word Fonts Ongoing

- JR John Rickard
- **Forum name:** #GemBox.Document Feature Request

When saving a Word document (docx) there is an option to embed Fonts in the file.

When loading and saving a Word document via Gembox.Document this embedded font is preserved - perfect.

However when saving to a PDF file, for example, the embedded font is lost. It would be great if this embedded font can flow through to the PDF file as an embedded font - so the PDF is correctly formatted.

Is this feature now supported?
MG **Mario - GemBox**

Hi, Unfortunately no, this feature is still not available. Also, I'm afraid we don't have plans for it in the current road-map, so it won't be available this year, for later I cannot say. Regards, Mario

What is the current status for this subject? Can we expect this in the (near) future? (or PDF/a support, as it supports embedding fonts as well)

Hi, I'm afraid there are still no plans for it, so it won't be done in near future. Regarding the PDF/A, it is already supported. Also, I'm not sure what you meant by it, note that GemBox.Document has always embedded fonts in PDF files. Regards, Mario

I would like embedded font support for presentation (PPTX).
