Support embedded Word Fonts New

- John Rickard
- **Forum name:** #GemBox.Document Feature Request

When saving a Word document (docx) there is an option to embed Fonts in the file.

When loading and saving a Word document via Gembox.Document this embedded font is preserved - perfect.

However when saving to a PDF file, for example, the embedded font is lost. It would be great if this embedded font can flow through to the PDF file as an embedded font - so the PDF is correctly formatted.

Is this feature now supported?

Mario at GemBox

2 years ago

Hi,

Unfortunately no, this feature is still not available.

Also, I'm afraid we don't have plans for it in the current road-map, so it won't be available this year, for later I cannot say.

Regards,

Mario

What is the current status for this subject? Can we expect this in the (near) future?

(or PDF/a support, as it supports embedding fonts as well)

Mario at GemBox

1 year ago

Hi,

I'm afraid there are still no plans for it, so it won't be done in near future.

Regarding the PDF/A, it is already supported.

Also, I'm not sure what you meant by it, note that GemBox.Document has always embedded fonts in PDF files.

Regards,

Mario

I would like embedded font support for presentation (PPTX).
