Support for ExcelComment.Parent property Completed

- TH Tom Hartland
- **Forum name:** #GemBox.Spreadsheet Feature Request

Please could you add a property or method to the `ExcelComment` class, to provide the parent `ExcelCell` instance the comment is on?

When you iterate through the `ExcelCommentCollection` it's not easy to find which parent cell the comment came from.

The following is a way of doing this (as provided by GemBox support) as a workaround:

```
var comment = worksheet.Comments[1];
var cell = worksheet.Rows.SelectMany(r => r.AllocatedCells).First(c => c.Comment ==
comment);
```

But it would be much nicer/cleaner to have a property/method directory on the `ExcelComment` instance itself.

Thank you,

Tom
