Support for Mail Merge context Completed

- MG Mario - GemBox
- **Forum name:** #GemBox.Document Feature Request

Often when customizing mail merge using MailMerge.FieldMerging event there is a requirement to access the current record (which holds the value) or to access the parent / ancestor record if customizing nested mail merge.

Add following class to GemBox.Document:

```
public class MailMergeContext
{
    int RecordNumber { get; }
    int RecordCount { get; }
    object Record { get; }
    string RangeName { get; }
    MailMergeContext ParentContext { get; }
}
```

Extend FieldMergingEventArgs with following properties:

```
object Record { get; }
MailMergeContext ParentContext { get; }
```
