Support for Mail Merge context Completed

- Mario at GemBox
- **Forum name:** #GemBox.Document Feature Request

Often when customizing mail merge using [MailMerge.FieldMerging event](#) there is a requirement to access the current record (which holds the [value](#)) or to access the parent / ancestor record if customizing [nested mail merge](#).

Add following class to GemBox.Document:

```
public class MailMergeContext
{
    int RecordNumber { get; }
    int RecordCount { get; }
    object Record { get; }
    string RangeName { get; }
    MailMergeContext ParentContext { get; }
}
```

Extend [FieldMergingEventArgs](#) with following properties:

```
object Record { get; }
MailMergeContext ParentContext { get; }
```

Hi,

This feature request has been implemented and is available in the latest versions of GemBox.Document.

Regards,

Mario
