GemBox Support Center

Support for multiple print areas Completed

- Ld Li Xiao dong
- **Forum name:** #GemBox.Spreadsheet Feature Request

Request for adding support for multiple print areas. GemBox.Spreadsheet offers an API for setting a print area on each worksheet, with a SetPrintArea method:

https://www.gemboxsoftware.com/spreadsheet/docs/GemBox.Spreadsheet.NamedRangeCollection.html#GemBox_Spreadsheet_NamedRangeCollection_SetPrintArea_

On the following link there is an example that demonstrates how to set worksheet's print area:

https://www.gemboxsoftware.com/spreadsheet/examples/excel-print-title-area/104

Currently, this method supports setting only a single cell range as a print area.

This is a real pain not to have this because may Excel workbook we receive have some multiple print-areas that we cannot directly render. Could you please add this feature?

Hi, GemBox.Spreadsheet introduced support for this, it is accomplished by using "SetPrintArea(IEnumerable ranges)" overload method:
https://www.gemboxsoftware.com/spreadsheet/docs/GemBox.Spreadsheet.NamedRangeCollection.html#GemBox_Spreadsheet_NamedRangeCollection_SetPrintArea_System_Collections_Generic_IEnumerable_GemBox_Spreadsheet_CellRange__ Regards, Mario
