Support for multiple print areas Completed

- Li Xiao dong
- **Forum name:** #GemBox.Spreadsheet Feature Request

Request for adding support for multiple print areas. GemBox.Spreadsheet offers an API for setting a print area on each worksheet, with a SetPrintArea method:

https://www.gemboxsoftware.com/spreadsheet/help/html/M_GemBox_Spreadsheet_NamedRangeCollection_SetPrintArea.htm

On the following link there is a sample which demonstrates how to set worksheet's print area:

<https://www.gemboxsoftware.com/spreadsheet/examples/excel-print-title-area/104>

Currently this method supports setting only a single cell range as a print area.

This is a real pain not to have this because many Excel workbooks we receive have some multiple print-areas that we cannot directly render. Could you please add this feature?

Hi,

GemBox.Spreadsheet introduced support for this, it is accomplished by using

"SetPrintArea(IEnumerable<CellRange> ranges)" overload method:

https://www.gemboxsoftware.com/spreadsheet/help/html/M_GemBox_Spreadsheet_NamedRangeCollection_SetPrintArea_2.htm

Regards,

Mario
