GemBox Support Center

Support for reading and deleting Comments Duplicate

- SM Samad Muhammad
- **Forum name:** #GemBox.Document Feature Request

I was looking to buy this component but realized it does not support comments yet. We need to be able to enumerate through all comments in a document, identify the exact location (start and ending position of the text in the document to which the comment applies which may span multiple paragraphs) of the comment, read the comment text and then delete the comment. Please let us know when you have that functionality available or if there is a way we can do that with the existing version.
